IMPACT EVALUATION

An assessment of the **causal effect** of a project , program or policy on beneficiary outcomes.

Estimates the change in outcomes **attributable** to the intervention.

HOW ARE IMPACT EVALUATIONS USEFUL?

As an input to funding decisions

To inform program design

As a means of influencing ideas

WHY DO IE SEPARATELY FOR MEN AND WOMEN

- Impact Evaluations often only look at average impacts and do not ask whether policies affect males & females differently
 - Truth is often hidden by averaging
 - Policy implications can be complex
- Examples (At-Scale RCTs)
 - Inquiry and Problem Based Pedagogy in 4 Latin Am. Countries
 - Vocational Training in Dominican Republic
 - High School Leadership Training and Soft Skills in Uganda

OUR OBJECTIVE

Estimate the causal effect (impact) of intervention (P) on outcome (Y).

(P) = Program or Treatment

(Y) = Indicator, Measure of Success

Example: What is the effect of a Cash Transfer Program (P) on Household Consumption (Y)?

CAUSAL INFERENCE

What is the impact of (P) on (Y)?

Impact = (Y with P) – (Y without P)

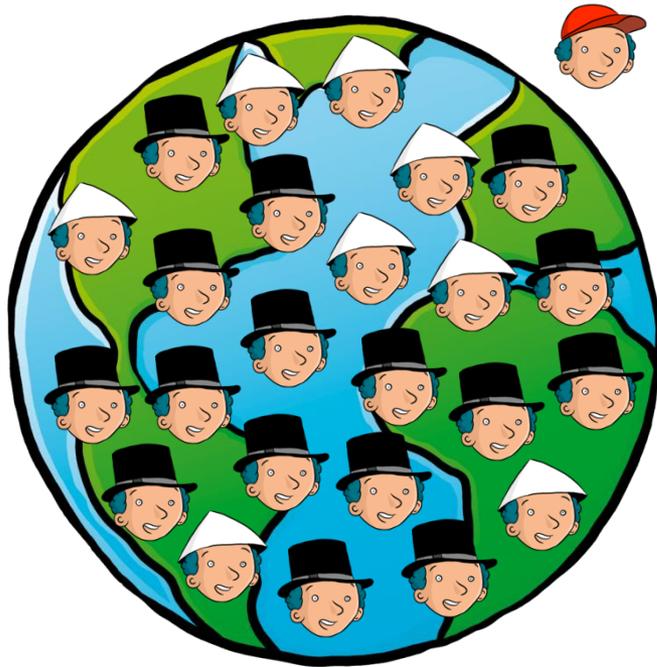

we observe (Y with P)

BUT we do not observe (Y without P)

Estimate “what *would* have happened to *Y* in the absence of *P*,” i.e. *the counterfactual*

GOLD STANDARD: RANDOMIZED TREATMENTS & COMPARISONS

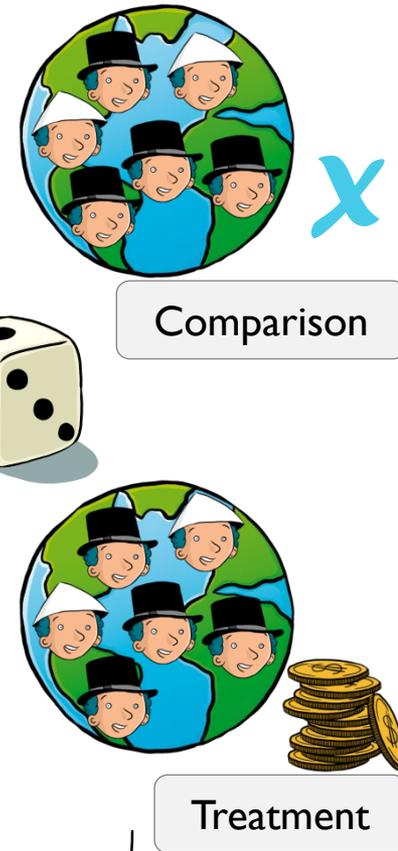

1. Population

2. Evaluation sample

3. Randomize treatment

 = Ineligible

  = Eligible

External Validity

Internal Validity

KEYS TO GOOD EVALUATION

- Internal validity
 - Randomized design or quasi-experimental design
- External validity
 - Representative & multiple locations and populations
- Powered: large enough sample sizes to observe meaningful minimal detectable effects
 - Enough to analyze gender specific effects

INQUIRY AND PROBLEM BASED PEDAGOGY (IPP)

- Students learn better when play an active role in learning through doable tasks with social interaction
- Traditional lecturing w/ passive listening not conducive to fostering critical thinking or inspiring interest
- IPP creates active problem solving opportunities
 - Learn by collaborating in solving real world problems, developing explanations and communicating ideas
 - Taught to search for information from different sources both text and own data collection
 - Develop problem solving skills by engaging in investigations

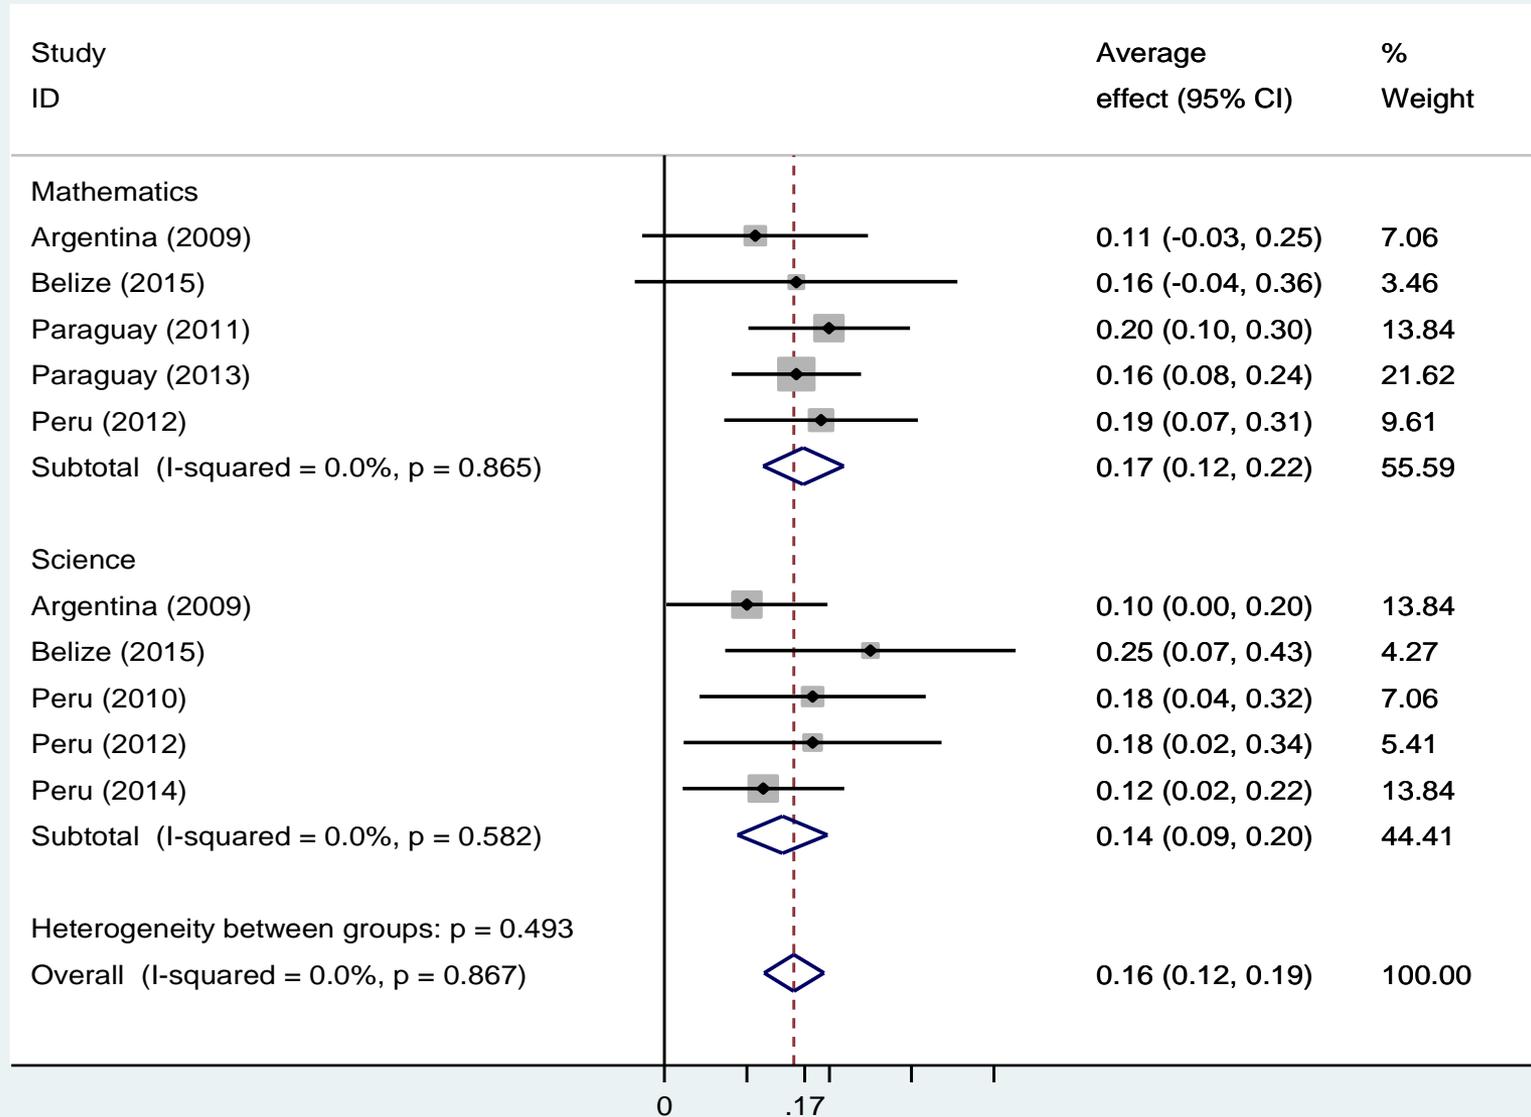

SCIENCE EXAMPLE

- Traditional pedagogy: copy facts about bone tissues and names of 206 bones in body. Then answer questions based on lecture and text.
- IPP: teachers pose research question; guide students through formulation of research questions, and testing of hypotheses;
- e.g. what do bones help people do? Students research bones from in texts and direct observation.
- They might ask what would happen if people had no bones? Answer by creating 3D clay figures and make predictions about how long could stand without toothpick bones
- Or, how does lose of calcium affect bone strength? Test by soaking bones in vinegar for different length of time

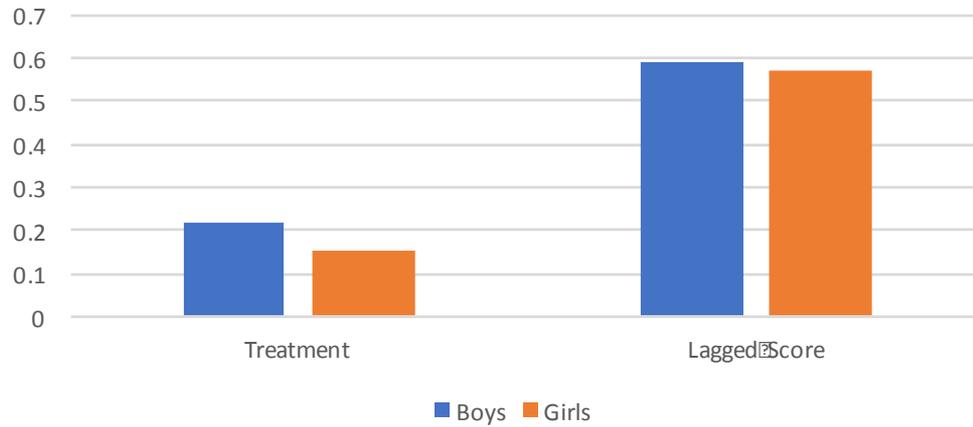

10 RCTS IN 4 COUNTRIES

- Countries: Argentina, Belize, Paraguay, and Peru
- Grades: preschool, 1st, 3rd, and 4th
- Years: 2009 – 2015
- Effect on test scores (standard deviations)
- Instantaneous effects
- long term effects exploiting dynamic complementarities

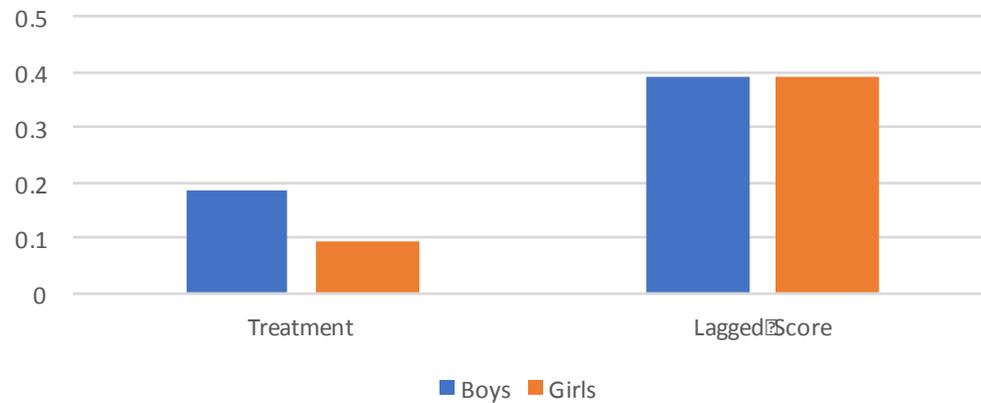

$$y_{ist} = \mu_s + \beta T_{is} + \gamma y_{ist-1} + \varepsilon_{is}$$

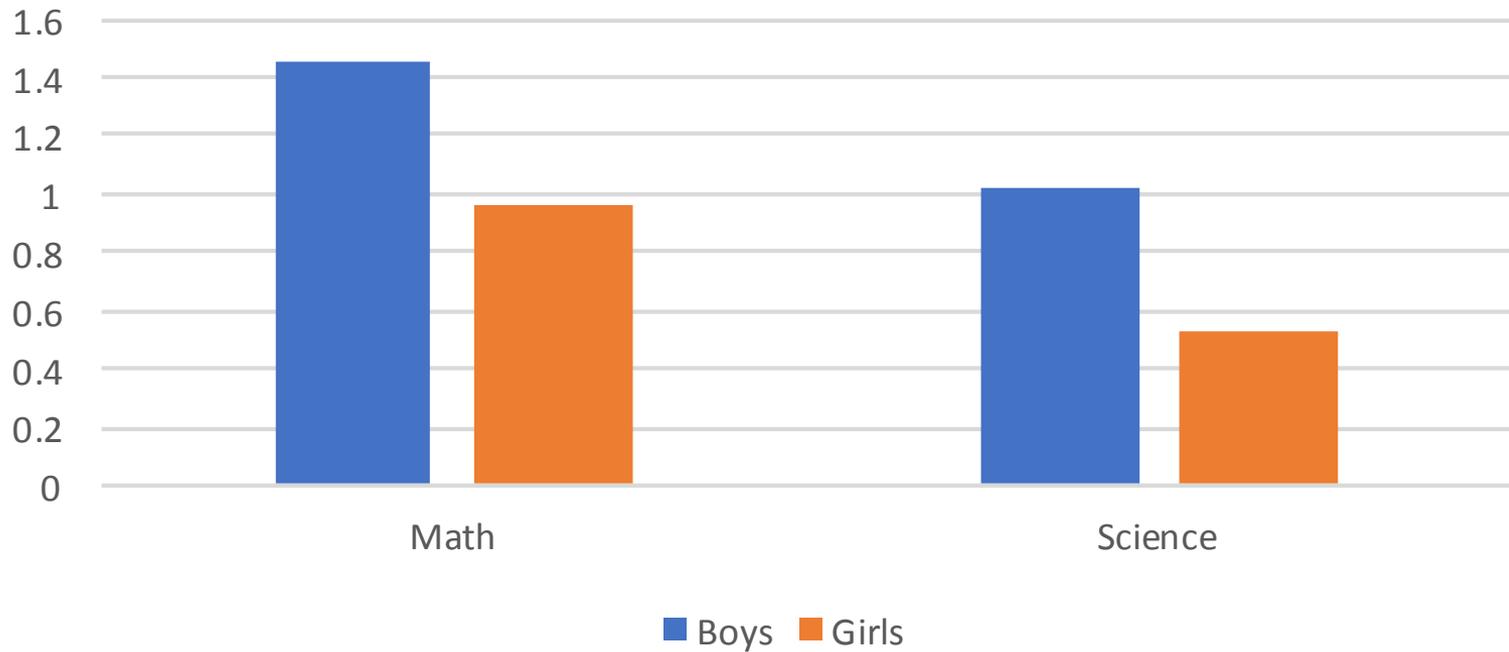

Estimated Instantaneous Treatment Effect and Lagged Score for Math

Estimated Instantaneous Treatment Effect and Lagged Score for Science

Effect of PPI on Cumulative Test Scores After 4 Years of Exposure

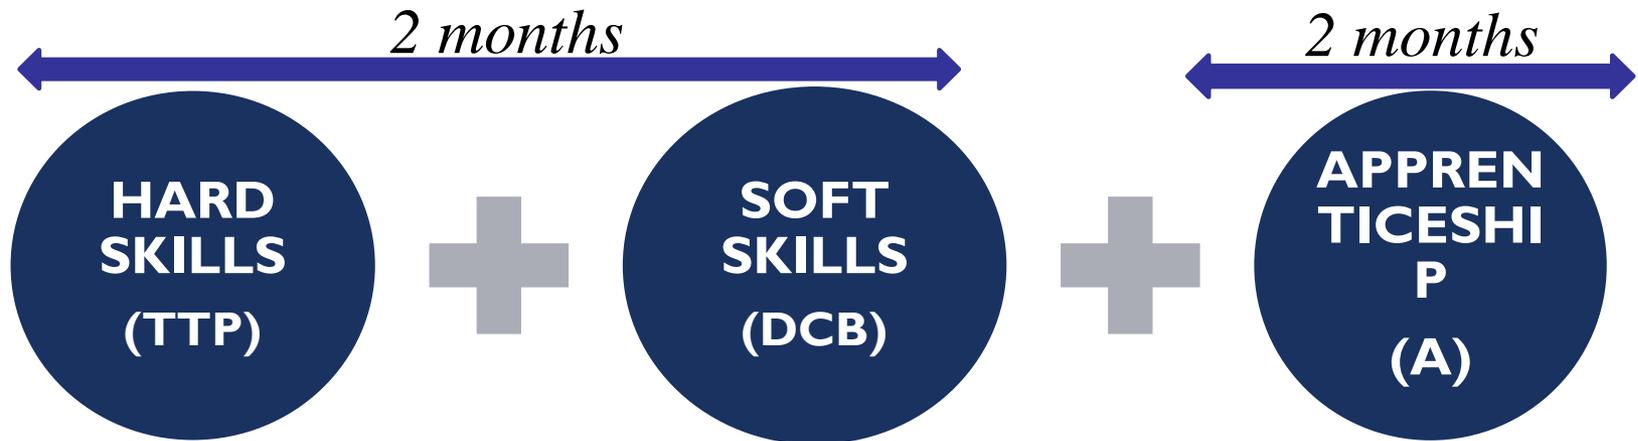

COMPLEX POLICY IMPLICATIONS

- IPP leads to large gains in learning
- Effect sizes bigger for boys than girls
- Why?
- While IPP is good for both boys and girls it widens the gap between them
- What are the policy solutions?

JOB TRAINING IN THE DOMINICAN REPUBLIC

(***16-29 years old, unemployed, with less than secondary education and living in poor neighborhoods**)
(***16-29 years old, unemployed, with less than secondary education and living in poor neighborhoods**)

150 hours

Courses on...

- Barman
- Beauty
- Accountant
- Electronics
- etc...

75 hours

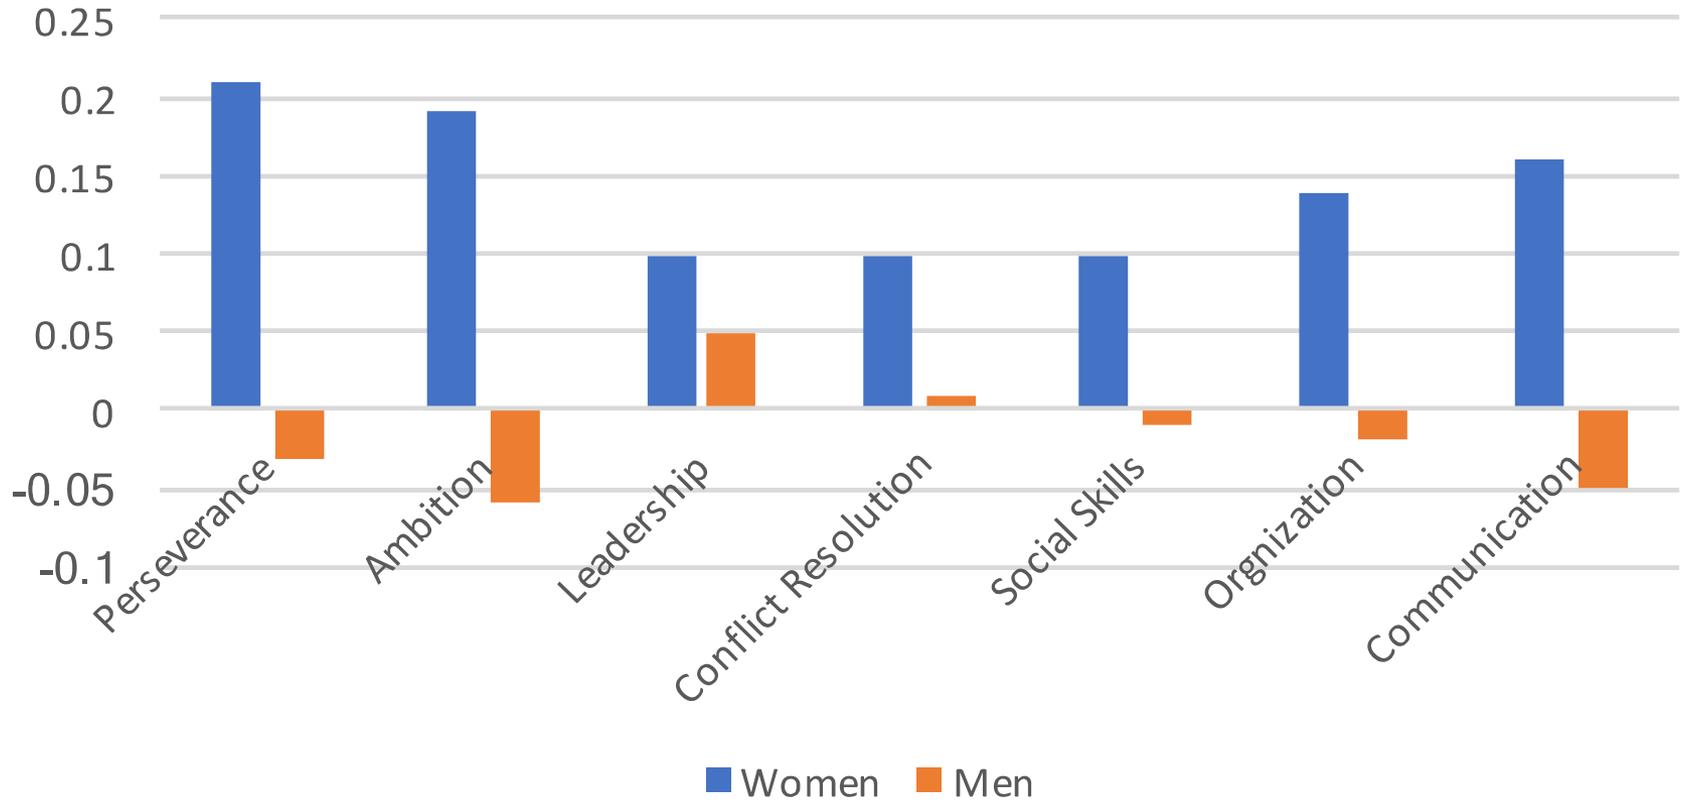

Themes on...

- Self-Esteem
- Conflict Resolution
- Communication
- etc...

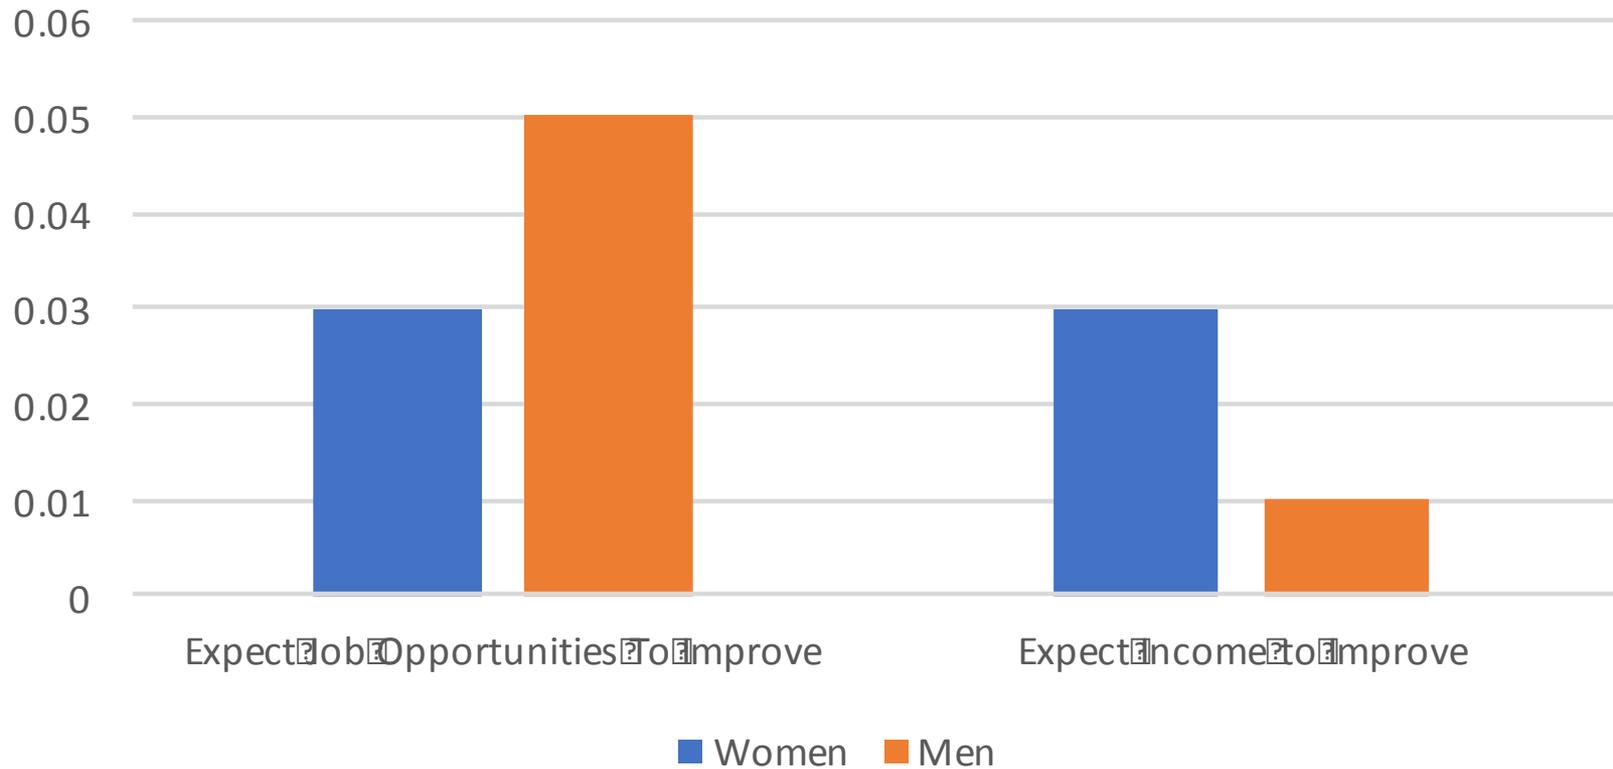

240 hours

In local firms

Impact of Job Training and Soft Skills After 3 Years

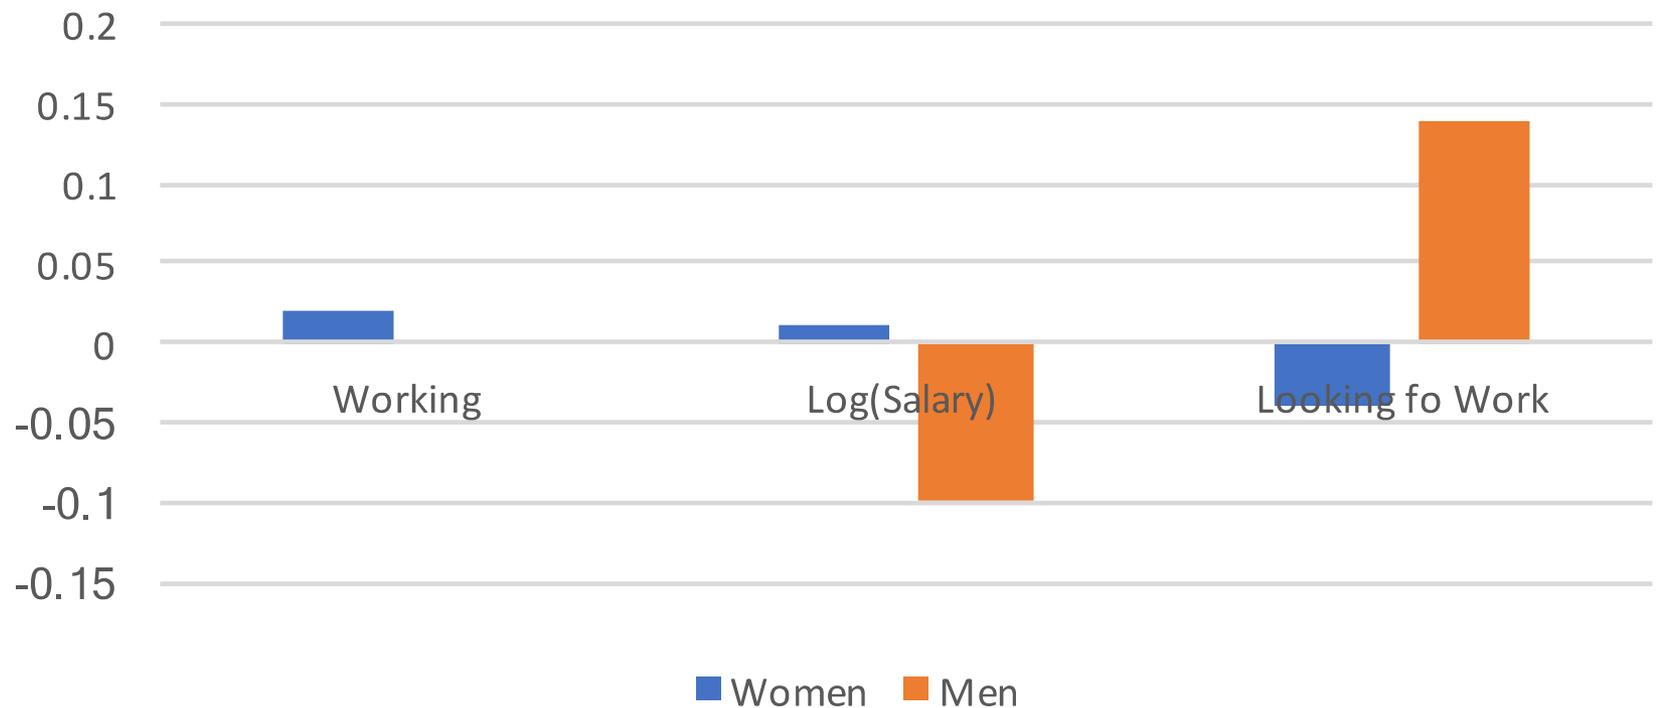

Impact on Expectations 12 Months after Training

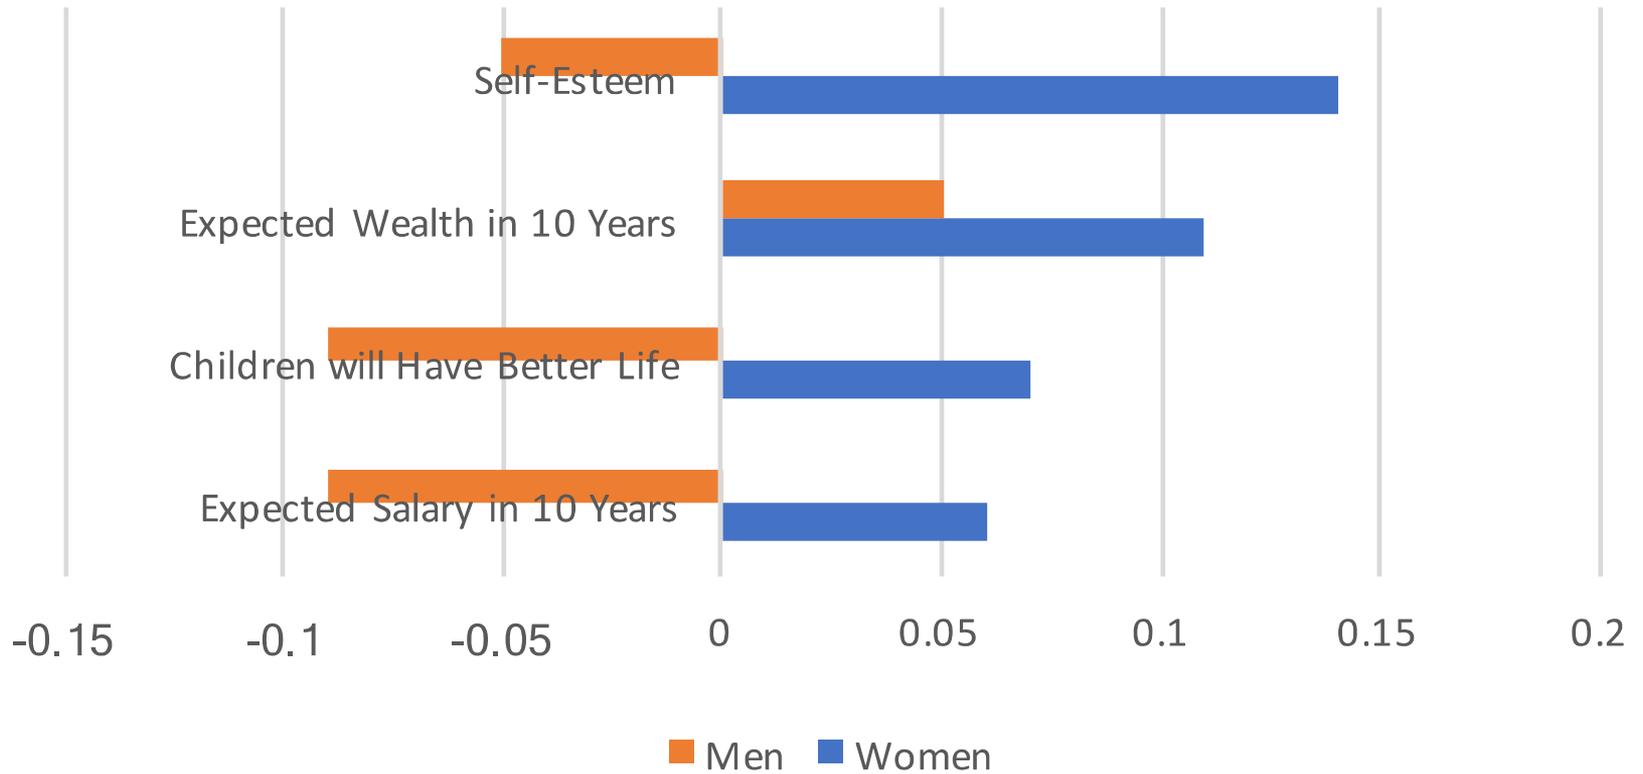

Impact on Labor Market Outcomes After 12 Months

Impact on Labor Market Outcomes 3 Years After Training

Impact on Welfare 3 Years After Training

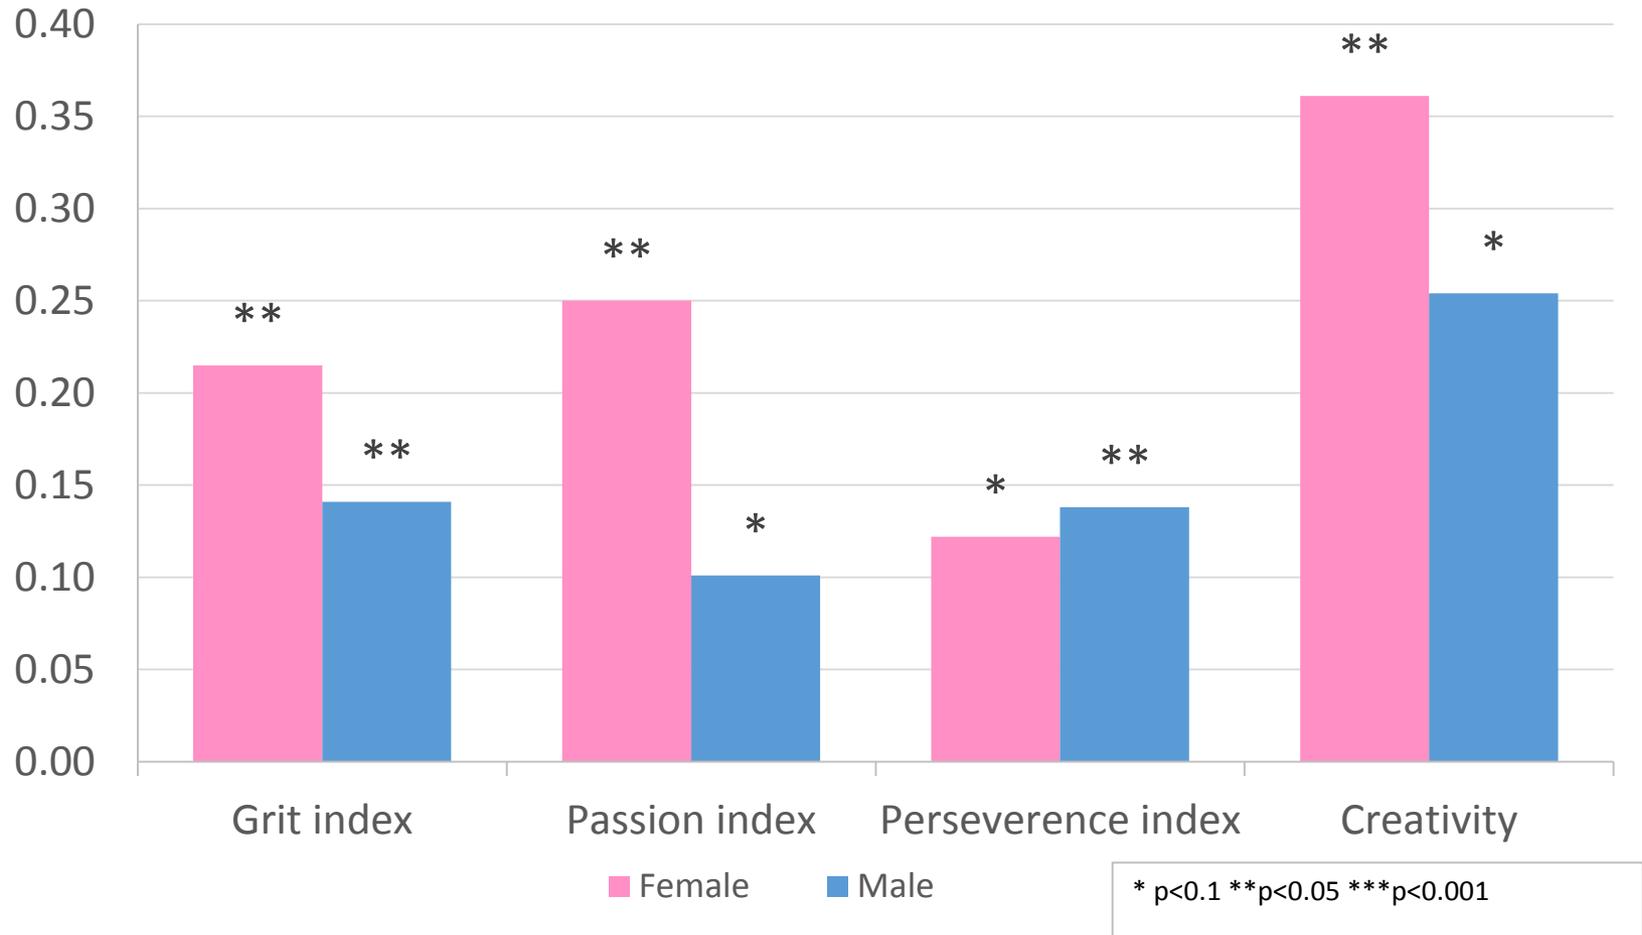

CONCLUSIONS DIFFERENT FOR MEN & WOMEN

- Women
 - Gained soft skills and expectations increased
 - Realized some gains in labor market and happy with their jobs
 - Better off in terms of self-esteem and future outlook
- Men
 - Did not gains skills, but expectations increased
 - Expectations not realized in labor market and unhappy w/ jobs
 - Discouraged worker effect and worse off

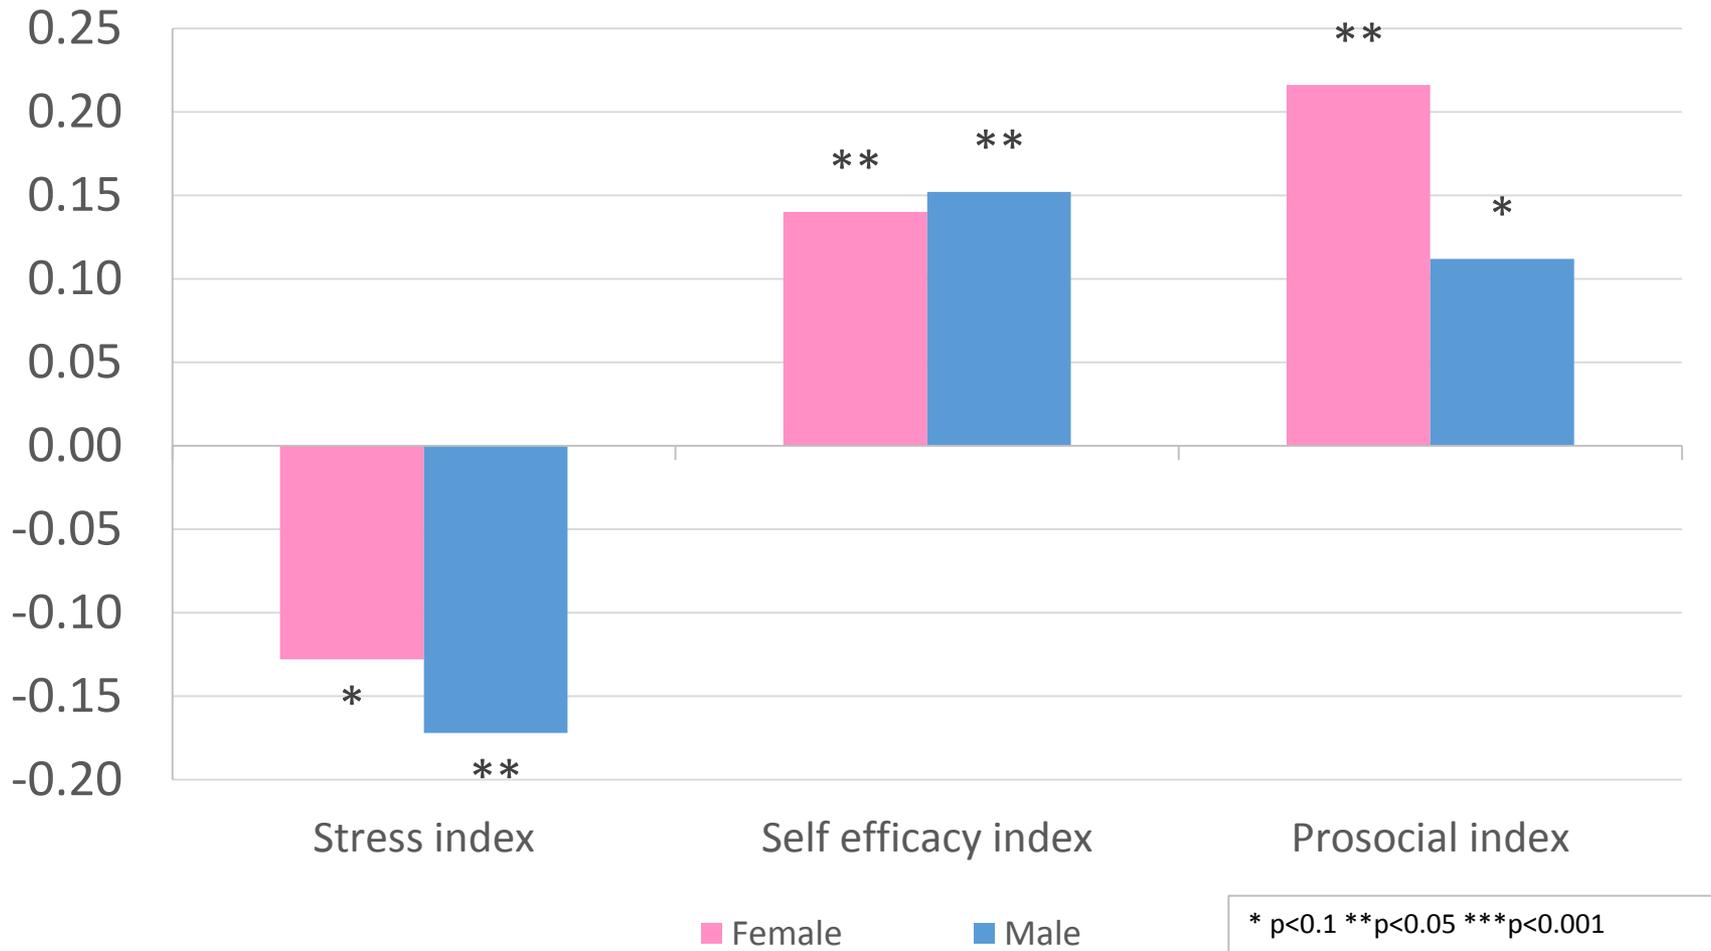

UGANDA – HIGH SCHOOL LEADERSHIP PROGRAM

- Educate! is centered on on two key modules: **Soft Skills development (Skills Lab) and Business Club.**
 - **Skills Lab** students learn about leadership, self-efficacy, confidence, critical thinking and problem solving through games, group work and public speaking
 - **Business Club**, students develop ideas for products and services that serve the needs of their community
 - **Mentors** help them develop ideas into social enterprises and community projects
- Examine how affected skills and demographic outcomes

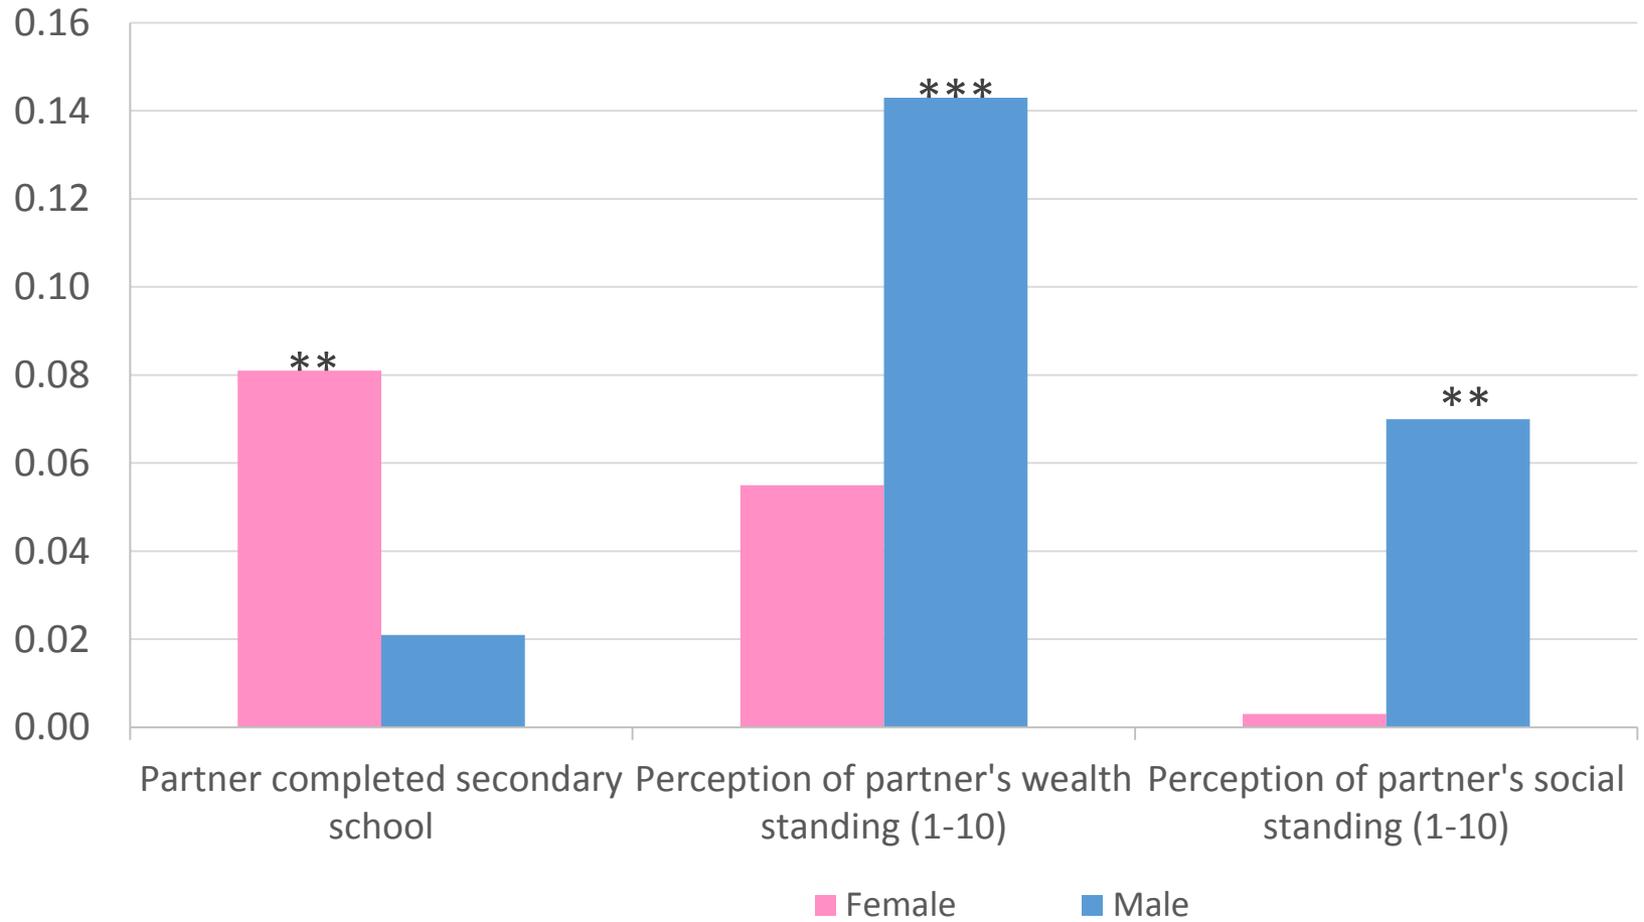

Educate! Psychological Measures

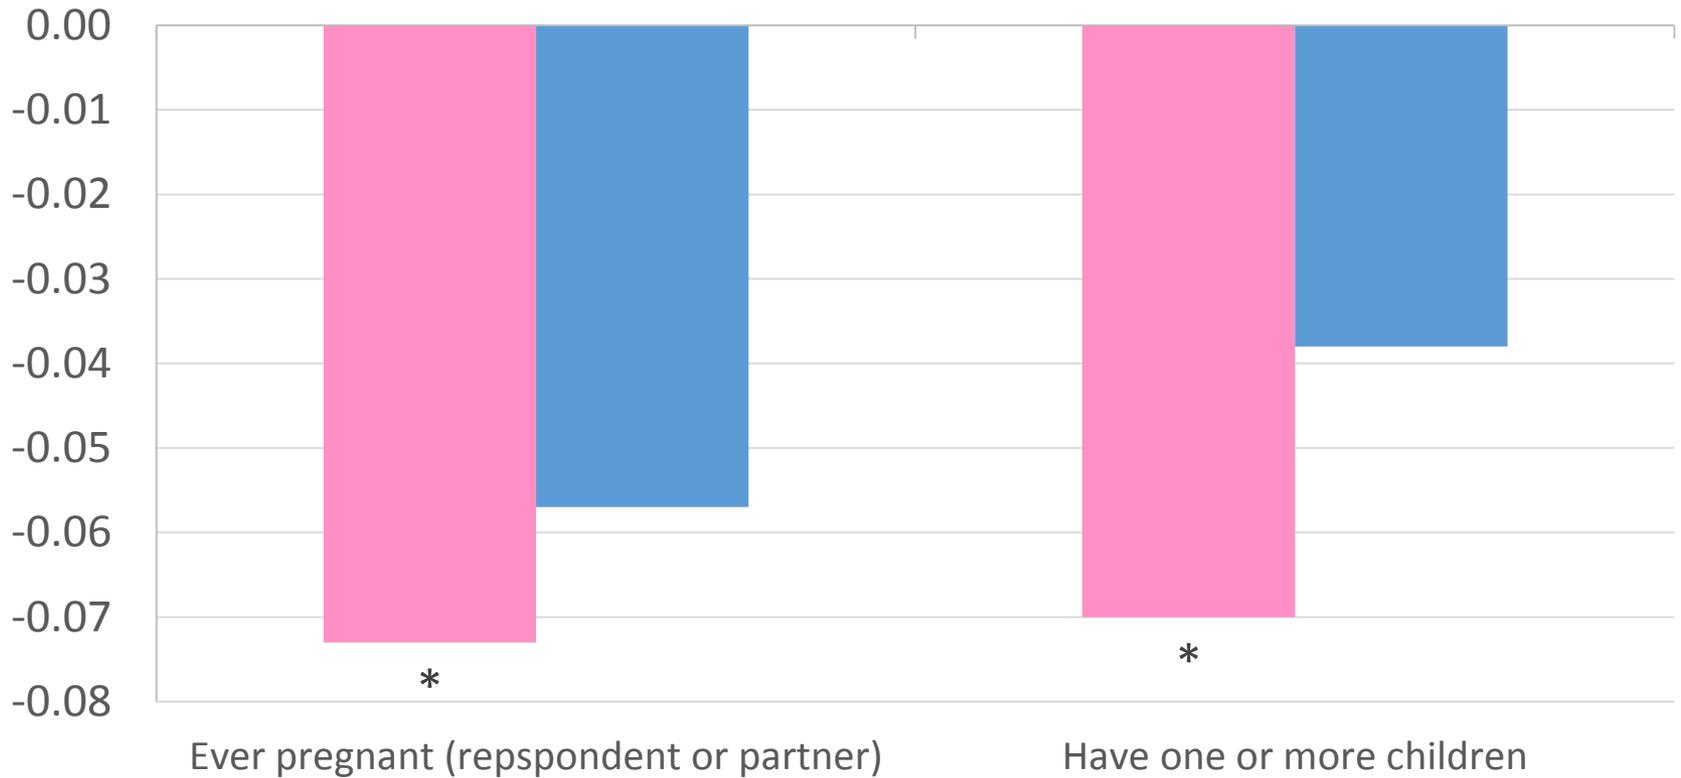

Educate! Psychological Measures

Educate! Partner Characteristics

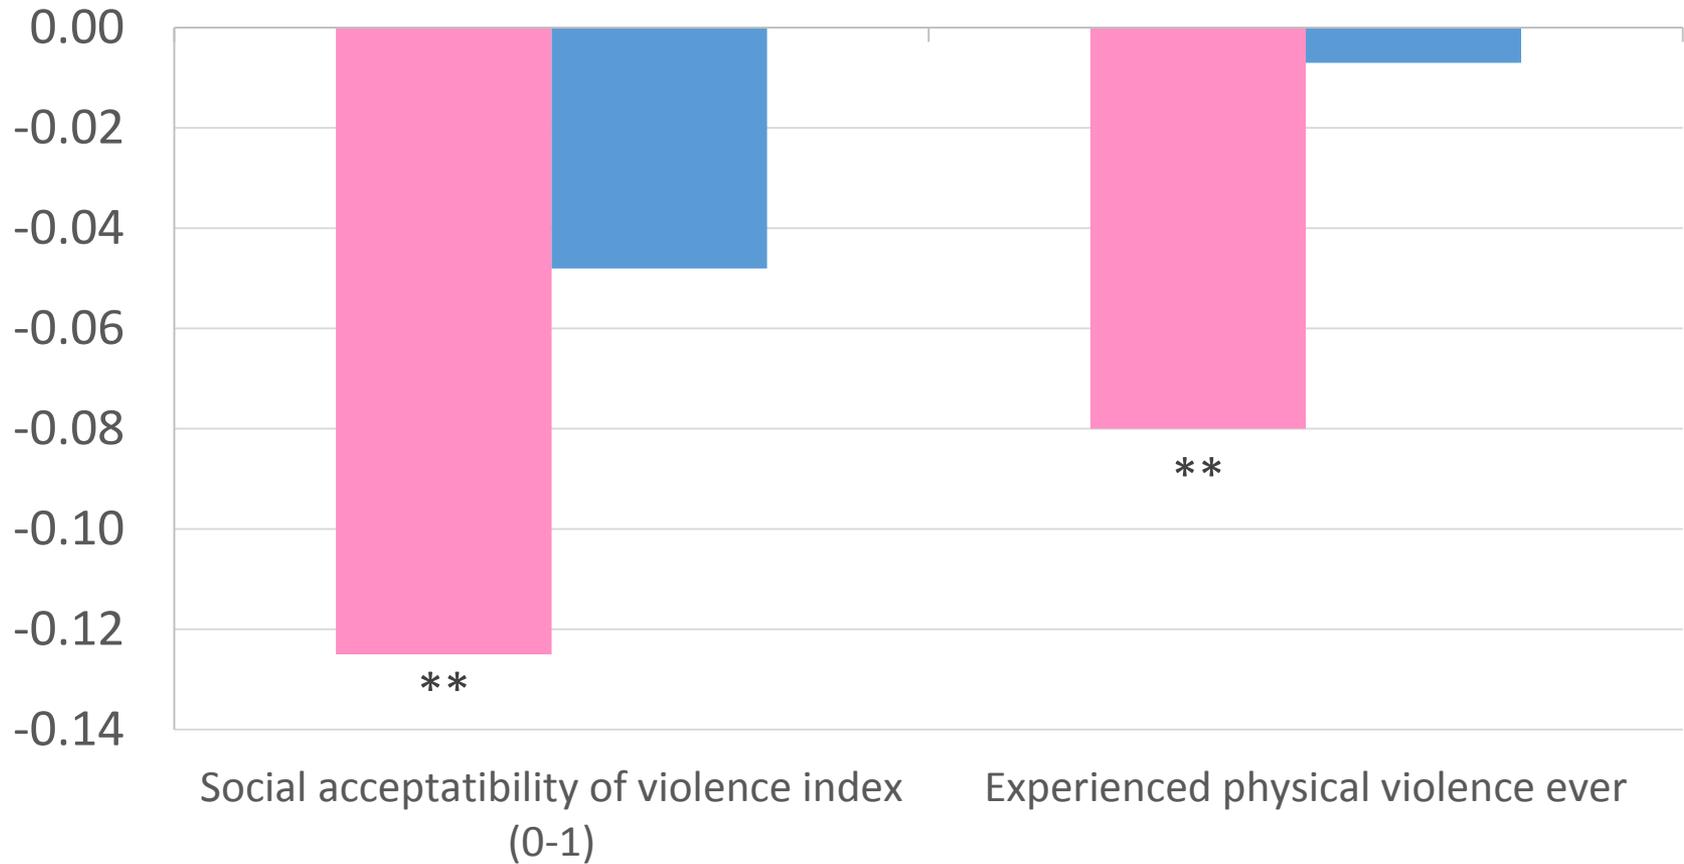

Educate! Fertility Outcomes

Female Male

* $p < 0.1$ ** $p < 0.05$ *** $p < 0.001$

Educate! Violence Attitudes and Incidence

Female Male

* $p < 0.1$ ** $p < 0.05$ *** $p < 0.001$

EDUCATE CONCLUSIONS

- Both men and women gains better soft skills, but women gained substantially more
- Both found higher quality partners
- Both lowered fertility, but women by more
- Women experience less violence

TAKE AWAYS

- Average impacts hide heterogeneity
 - Often policies & programs affect men and women differently
 - Investigate why and what can be done
- Lead to complex policy choices
 - Helping all may lead to greater gender inequality
 - Design and evaluate changes to reduce inequality without sacrificing benefits
- Need to build into evaluation designs: **SAMPLE SIZE**
